9.数据库

数据库关系结构

M	ט	U	U		L	1	U U	11
员工信息表Employee								
编号EmployeeID	姓名Nam	e 性别Sex	入职时间Onbo	ardingTime	地址Address	电话Phone	人脸IDFaceID	头像Headfile
				_				
			•		J			
考勤表Attendance								
编号AttendanceID 员工编号En		nployeeID 考勤时间AttTime		备注Notes				

服务器端添加数据库

步骤

- 1. 工程文件添加 sql 模块 QT += sql
- 2. 添加头文件

```
#include <QSqlDatabase>
#include <QSqlError>
#include <QSqlQuery>
```

3. 创建表格

```
// 连接数据库
    QSqlDatabase db = QSqlDatabase::addDatabase("QSQLITE");
    // 设置数据名称
    db.setDatabaseName("server.db");
    // 打开数据库
    if(!db.open()){
        qDebug() << db.lastError().text();</pre>
        return -1;
    }
    //创建员工信息表
    QString createsql = "create table if not exists emplyee (employeeID
integer primary key autoincrement, name varchar(256), sex varchar(32),\
address text, phone text, faceID interger unique, headfile text)";
    QSqlQuery query;
    if(!query.exec(createsql)){
        qDebug() << query.lastError().text();</pre>
        return -1;
    }
    //创建考勤表
    createsql = "create table if not exists attandence (attendanceID integer
primary key autoincrement, employeeID integer,\
attendaceTime TimeStamp NOT NULL DEFAULT(datetime('now','localtime')))";
    if(!query.exec(createsql)){
        qDebug() << query.lastError().text();</pre>
        return -1;
    }
```

4. 结果

	RecNo	Column Name	SQL Type	Size	Sca
Þ	1	employeeID	integer		
	2	name	varchar	256	
	3	sex	varchar	32	
	4	Onboarding Time	text		
	5	address	text		
	6	phone	text		
	7	faceID	interger		
	8	headfile	text		

	RecNo	Column Name	SQL Type	Size
١	1	attendanceID	integer	
	2	employeeID	integer	
	3	attendaceTime	TimeStamp
